

Poon, a gamer, is curious about the Xbox logo. He wonders why it's an X in a circle instead of a square box. To create a new and accurate Xbox logo, he kindly requests you to write it in C. Firstly, it should have an X (obviously). Then have a square box cover the X.

Every \* is "\*" " for the last one of each row, it requires " " after the "\*". Otherwise your submission may be not accepted.

## Input Format

An Integer defined width and height of the box with X init.

## Constraints

$3 < n$

## Output Format

A beautiful new XBox Logo.

## Sample Input 0

16

## Sample Output 0
