

D: Discord Discard

Jack is an developer at Discord. The feedback from executives said that there are too many improper words in Discord and they want you to decrease them.

In order to solve the problem, your intelligent gut think that you gonna let user type the number which is length of the characters that user want to type. Then get a character that will be banned e.g., 'n'. After that, let user type characters if the user does not type that character in it will print character by character right away. if the user type the banned character the program will skip to print the character.

Input Format

an integer n - length of characters
an character x - banned character
character c1, c2, c3, ... cn - characters

Constraints

-

Output Format

characters that not the banned character.

Sample Input 0

```
7
z
z
a
b
z
c
d
z
```

Sample Output 0

```
abcd
```

Sample Input 1

```
5
n
N
n
a
N
b
```

Sample Output 1

NaNb

Sample Input 2

```
7
!
H
e
l
l
o
!
!
```

Sample Output 2

```
Hello
```
