

[Extra] N: Nokia 3310

Your grandpa John used Nokia 3310 for more than 20 years.

As a good lahn pu, you bought John a new smartphone iPhone 16 Pro Max with 2TB Storage Dessert Titanium. Unfortunately, your John cannot use the present way input interface which is keyboard. He misses the old numpad of Nokia 3310.

Figure 2: iOS18 Keyboard Interface

That's pretty sad 😞.

By the way, as a top CS student in ICT Mahidol, you come up with a brilliant idea. You are going to make a software to replace iOS keyboard.

These are the features of your software:

1. After receiving data from the interface, you will get something like 4442228
2. Then your program will translate the numbers into words that is 4442228 ---> ICT

(source: https://th.wikipedia.org/wiki/โนเกีย_3310)

Let's Implement it!

Input Format

N - Sequence of number which is input from numpad

Constraints

N will be the compound of 2, 3, 4, 5, 6, 7, 8, and 9.

Output Format

W - converted word.

Sample Input 0

4442228

Sample Output 0

ICT

Sample Input 1

8887776653444

Sample Output 1

VRNJDI
